Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

1. The drawings are objected to because each box in the different figures must be textually labeled. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by West (US Patent 4776528).

West teaches a control apparatus for a plurality of DC motors 28/32 comprising hall effect devices 38/44 for detecting the position of the motors, drive means 42/46 for controlling the current through the motors, and a control means 40 for detecting the number of rotations of the motors 32/28 and controlling the operation of the motor based on said input.

Claim 2, West describes that a strip of tape 14 is secured between the two motors and that one of the motors is used to feed out the strip and the other one is used to wind up the strip.

Claim 4, West describes that said motors include motor shafts 30 and 36.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over West (US patent 4776528) and Simson et al (US patent 5717424).

The only difference between the teachings of West and the subject matter of claim 3 is that claim 3 recites that the strip secured around the motor shaft comprises posters of same length.

Simson et al teaches a web system for controlling motors 12 and 13 for feeding out and winding up a plurality of pliable banners 1/2/3.

It would have been obvious to one person of ordinary skill in the art to use a motor control system as taught by West to wind and un-wind a strip of posters connected between two motors since West describes that his invention can be used in any type of reel to reel web transport apparatus.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The documents cited in PTO-892 describe other web systems using DC motors and position sensors such as hall effect devices.
